The book has some great exercises that helped me practice before the test. The longer you practice the better you get at it and they also had very clear steps that show you exactly what you need to do to arrive at the accurate answer that was your calculation of the dose you are giving is not too much or too little to damage the patient which is very important in the healthcare. I believe most schools need you to pass this course with at least 3.8GPA so there is very little if not any room for mistakes.

Our med essentials book didn't come with how to do calculations, so we received a packet, but there weren't any practice problems. I found this as an excellent supplement to my original text.

thanks

I was under the impression that I was getting the access code sealed with the book. The description said sealed access code but it had already been unsealed and used. Otherwise book was in excellent condition

I'm so stupid with math, this book after reading it and practicing it helped me understand the medication calculations

book came on time and as described

This is a great book to practice, I love that it shows how to go through the steps and explanations are very helpful..labels and problems are current, and with actual med labels. I'd jag several Nursing friends ask to see it.. Great resource

Helpful book. Everything you need to know it's here. Very simply. This book will help you do better in math and pass any exams. Deff worth it. I rented the book used and it was in great condition recommend this book to anyone.
