Customer Reviews

I bought many titles from this series for my middle and high school students. They were popular with both boys and girls. Boys are particularly difficult to provide for in a reading classroom, this series resolved that problem. They were excited to read them and didn't resent writing about what they'd read. I recommend the 24/7 series to all teachers. They're a great classroom library builder.

Only has a preview of the subject. Lot of info for other sources of info

Mu husband picked this up when it came and my Son and he read out of it all the time and are always getting grossed out. They think it is the best!

Good introduction for curious young minds. My 10 year old likes to think out of the box and be a little different from the norm. He needed a book for a book report about living organisms. He wanted to learn about parasitic worms. There are no other books that I could find at an appropriate reading level. As appreciative I am that this book exists, it is not nearly as informative as I hoped. I think the author wrote it more for the shock value and gross factor. It does include some important and facts, but it's very general with a few case studies. Although, his teacher did approve the book, I wish it would have had more educational substance.
