Veterinary Embryology

Synopsis

A thorough appreciation of the cellular, molecular and tissue changes which precede the birth of an animal is a fundamental requirement for understanding normal structural development and also abnormal processes which result in congenital defects. This textbook provides information relevant to many subjects taught in preclinical, paraclinical and clinical years. Early chapters describe and explain sequential events relating to the division, growth and differentiation of cells and to the formation of foetal membranes, implantation and placentation. Succeeding chapters trace the origin, growth, development and maturation of the major body systems. Age determination of the embryo and foetus is reviewed in a single chapter. Genetic, chromosomal and environmental factors which adversely affect pre-natal development are reviewed in the final chapter. A reading list at the end of each chapter offers additional sources of information on the topics discussed. Tables, flow diagrams and numerous hand-drawn illustrations provide information in a form which complements the concepts presented in the text. Key features: Written by a team which includes members with expertise in developmental anatomy, molecular biology and clinical aspects of veterinary medicine. The authors have extensive experience in the teaching of veterinary embryology and cognate subjects. Illustrations, hand-drawn by a veterinary graduate, are used extensively to explain organogenesis and system development. An explanatory glossary provides concise information on specialised terms used in the text. The index is designed for easy retrieval of information.

Book Information

Paperback: 392 pages

Publisher: Blackwell Publishing; 1 edition (June 26, 2006)

Language: English

ISBN-10: 140511147X

ISBN-13: 978-1405111478

Product Dimensions: 8.3 x 0.8 x 11.7 inches

Shipping Weight: 2.7 pounds (View shipping rates and policies)

Average Customer Review: 4.4 out of 5 stars 2 customer reviews

Best Sellers Rank: #1,779,376 in Books (See Top 100 in Books) #78 in Books > Textbooks > Medicine & Health Sciences > Medicine > Basic Sciences > Embryology #155 in Books > Medical Books > Basic Sciences > Embryology #790 in Books > Textbooks > Medicine & Health Sciences > Veterinary Medicine > General

Professor P.J. Quinn, T.A. McGeady, M.T. Ryan and E.S. FitzPatrick are all at University College, Dublin, in Ireland.

Good book. Very didactic

I got this book in hope that it would answer some of my questions about embryology. It's a tough topic to learn in college. This book helps in that it has really clear diagrams and good explanations of how and where things fold/migrate and move and so on....I've done plenty of searching on the web and I can't find any other recent vet embryology book specifically for students that isn't from the eighties. If you do would you let me know? Overall I'm very happy with this purchase and would recommend it to anyone wishing to learn about embryology in animals.
