If you are in medical school, then this review applies to you. The questions in this book are repetitive and not challenging. The questions are generally single-step, whereas boards style questions are two- or three-step. At my medical school, our exams were also two- or three step- questions. The clinical scenarios and patient presentations are not very well written. I went through this entire book while studying for microbiology, and then luckily someone recommended Kaplan Qbank for USMLE Step I - and these questions were much more challenging, demanded a more thorough understanding of the material than the level of comprehension required for this book. I was very successful in my medical school exams in general because I used Qbanks. The good news is that if you are reading this review then you have realized that you should be doing practice questions in order to prepare for medical school exams and board exams. Use either UWorld or Kaplan Qbank for your exam and board preparations and you will be much better off.

I got this book for some extra microbio questions in preparation for Step 1. I am using it in conjunction with First AID. Overall I think the book is very good at giving board-style questions (long stems, secondary/tertiary questions) when it comes to bacteriology and virology, but definitely lacks in the mycology and parasitology sections. The questions in the mycology and parasitology sections almost seem too straight forward, testing basic knowledge of the material. In addition, there are only 30-50 questions in each of those areas compared to hundreds in bacteriology and 100+ in virology. Also, if you plan on studying microbiology by system, you might find the layout of questions annoying. It's more of a grab-bag review book and is better approached if you study by infectious organism since that's how the chapters are broken up.

I think the worse part is you cannot go by systems and I thought it was unnecessarily detailed. I am glad I did not go through the whole book. It would have been too much info for nothing. I did just fine on the test with First Aid Micro section. If you want to score a 99.. disregard my advice and go all out.

great review for microbio highly recommend for med students

The book was received in a timely manner and my friend, whom I purchased it for, found it very helpful in her study and thought that the overall physical quality of the book was great as well.

The best way I've found to learn material is to do problems. Hence I purchased this book to

complement the course lecture / notes offering at my school. The questions are very good, many are vignette-based which is similar to the way our exams are written. In terms of the material covered and the difficulty of the questions, I would give this a 4 or a 5. However the book has only four chapters - Bacteriology, Virology, Mycology and Parasitology. My school teaches material based on modules - Cardiovascular, Pulmonary, GI, etc. Hence, trying to find the appropriate questions to to in the book is a nightmare. For instance, if I want to review my pulmonary learning, I first go to the Bacteriology question, read the intro to EACH question, and determine if it's something I'm supposed to know about (ie is it an URTI, LRTI, pneumonia, typical/atypical tuberculosis, etc). I have to do this for each of the four sections (well, for Pulmonary at least Parasitology is not applicable). As you can imagine this can be a painstaking process, especially since I, like most medical students, am already pressed for time. This would not be such a problem if there was a list somewhere - either in the book or on the web - listing questions based on topic. For instance, with Pulmonary - Bacteriology q4, 9, 20, 28, 34, 41, 49, 55, 121; Virology - 54, 76, 100; Mycology - 17, 21, 22, 25. Alas, such a list does not exist, But, as far as I know, this is the best / only question book available, so it will have to suffice. Again, if material were organized better or if question numbers were listed somewhere based on topic, I would give this book a 4 if not 5. But because of the difficulty in finding appropriate questions, I'm giving it a 3.-MS-II
